

Practice:: HashMap – Inheritance – Interface

- 1 – Add product information
- 2 – Show all products
- 3 – Delete a product
- 4 – Filter products by SUPPLIER
- 5 – Sort and display product
 - 5.1 – Sort by name (ASC)
 - 5.2- Sort by value (DES)
- 6 – Statistics the products by SUPPLIER
- 7 – Save data to file
- 8 – Load data from file
- 9 – Exit program

Pay attention:

- Value method is price times quantity
- Vat = 8% value of the product:
- Promotion method is calculated by 15% of the value if the field haPromotion is true

Useful methods of Map interface

Method	Description
V put (Object key, Object value)	It is used to insert an entry in the map.
void putAll (Map map)	It is used to insert the specified map in the map.
V putIfAbsent (K key, V value)	It inserts the specified value with the specified key in the map only if it is not already specified.
V remove (Object key)	It is used to delete an entry for the specified key.
boolean remove (Object key, Object value)	It removes the specified values with the associated specified keys from the map.
Set keySet ()	It returns the Set view containing all the keys.
V get (Object key)	This method returns the object that contains the value associated with the key.
Collection values ()	It returns a collection view of the values contained in the map.
boolean containsKey (Object key)	This method returns true if some key equal to the key exists within the map, else return false.
boolean containsValue (Object value)	This method returns true if some value equal to the value exists within the map, else return false.
boolean isEmpty ()	This method returns true if the map is empty; returns false if it contains at least one key.
V replace (K key, V value)	It replaces the specified value for a specified key.
void clear ()	It is used to reset the map.
int size ()	This method returns the number of entries in the map.
